## Executive summary

What was provided by AAGI and the main results?

## Introduction

- Goals of the research project.
- Background, context and rationale behind the research.

## Experimental/Trial Design

- Trial design type and layout.
- Treatments, number of replicates.
- Specific considerations for small plots, glasshouse, genetics, breeding trials, OFE projects, or bioinformatics.

## Exploratory Data Analysis and Data Visualisation

- Interpretation of plots and data.
- Rationale behind specific methods used.

## Methods

- Detailed description of the procedures and methodologies used.
- Include versions/commits on developed pipelines, scripts, and input/output details if applicable.

## Analysis (if separate from Methods)

Approach taken for data analysis.

## Results and Discussion

Findings and their implications.

### Figure example

Figure 1: An example figure using {ggplot2}.

### Table example

Table 1: An example table using {flextable}.

| Ozone | Solar.R | Wind | Temp | Month | Day |

## Metadata and Datasets (Optional)

- md5sums for input data and outputs (if applicable).
- Git commit numbers and tags.
- Location of outputs (FAIR Data).
- DOI for AAGI outputs.

## Map (Location, Optional)

Include if relevant to the project.
